SUMMARY

Senior Data Engineer with 7+ years of experience building high-volume AdTech platforms for a global mobile game company. Expertise in architecting scalable pipelines (3B+ records) and predictive serving systems on bare-metal environments. Currently focused on driving business productivity through Event-Driven Architectures and GenAI-powered automation.

EXPERIENCE

❖ Senior Data Engineer, Bitmango Aug 2019 — Current
Seongnam, South Korea

1. Ads Data Infrastructure & Modeling

- **Unified Data Pipeline:** Architected a **Single Source of Truth (SSOT)** data mart by integrating fragmented data from 6+ major advertising channels (Google Ads, Meta, IronSource) and MMPs (Appsflyer).
- **Revenue Prediction Support:** Collaborated with Data Scientists to engineer robust pipelines delivering large-scale training datasets and features, enabling campaign revenue prediction models to maintain over 90% accuracy in aggregated forecasts.
- **Self-Service Analytics:** Enabled stakeholders to generate independent reports via Superset and Google Sheets, significantly reducing dependency on engineering support

2. Infrastructure Modernization & Performance Tuning

- **Engineered a metadata-driven Dynamic DAG factory** in Airflow to centralize monitoring for 40+ legacy scripts, **decoupling pipeline logic from definition to allow instant onboarding of new ETL processes via config files.**
- **OLAP Migration (StarRocks):** Led the migration from a legacy column-store DB to **StarRocks**, achieving a **12.4x performance improvement** in complex aggregation queries.
- **Data Reliability:** Deployed **MinIO** to establish a periodic backup pipeline for mission-critical data, minimizing data loss risks and ensuring business continuity.

3. AI Automation & Ops Support

- **Event-Driven Architecture:** Introduced **Apache Kafka** to transition large-scale campaign control requests into an asynchronous message queue system, decoupling services and enabling a flexible automation environment.
- **AI Marketing Agent:** Developed an autonomous agent using **Python, LangChain, and Gemini (LLM)** to automate repetitive tasks such as budget adjustments and campaign status controls.
Impact: Automated operations for **1,500+ campaigns**, reducing manual operational workload by over **90%**.
- **Internal Tooling & Backend:** Engineered a **Django-based** backend to power an Ad Asset Analysis page and Campaign Automation tools. Exposed complex data logic via REST APIs to improve data accessibility for cross-functional teams.

❖ Backend Developer, Wooam Corporation Jun 2018 — Jul 2019
Seongnam, South Korea

FAST DR (Demand Response) System: Built real-time IoT data ingestion pipelines utilizing **MQTT** protocols and developed load control controllers for automated energy management

EDUCATION

❖ Sungkonghoe University 2012 – 2018

B.S. in Computer Engineering, Seoul

SKILLS

- **Languages:** Python, SQL, Bash
- **Data Engineering:** Apache Airflow, Apache Kafka, StarRocks, Impala, HDFS
- **Database & Storage:** MySQL, PostgreSQL, MiniIO, Milvus
- **DevOps & Tools:** Docker, Git/GitLab
- **AI/LLM:** LangChain, LLM (Gemini)

CERTIFICATIONS AND LICENSES

Engineer Information Processing (South Korea, National Technical Certification) - 2018-11
